ABSTRACT

Using grain fee statistics for eighty five towns throughout the Middle East, South, and Southeast Asia among 1870 and 1914, this paper addresses 3 questions about the monetary records of colonial Asia became developing marketplace integration within side the area pushed through integration among port towns throughout unique nations and colonies of the Indian Ocean, or pushed broadly speaking through accelerated integration among port towns with indoors towns of the colonial hinterland? (2) What became the relative effect of railroad and steamship transportation generation in contributing to local marketplace integration? (3) Among colonial port towns, became there an extraordinary position for the number one entrepots as centres of the colonial financial system in using local marketplace integration as compared to smaller, minor ports of the Indian Ocean?

Results display first off that the Indian Ocean area underwent a method of speedy marketplace integration within side the length, and that developing integration of the Indian port towns with different ports at extra distances drove this method throughout the seas, instead of interactions with different towns of the sub continental hinterland in nearer proximity. Second, steamships connecting port towns throughout the Indian Ocean performed a extra position in contributing to the method of integration as compared to railroads connecting indoors towns over land. Third, no matter the sizable literature devoted to analyzing the particular social, cultural, and monetary position of the important Asian entrepots, they have been now no longer extraordinary drivers of local integration as gateways linking the colonial hinterland with the worldwide financial system, however have been a part of a bigger method of integration pushed specially through get right of entry to to the Indian Ocean. This paper demonstrates that through increasing the geographic scope of evaluation, numerous different dimensions of marketplace integration withinside the colonial Indian Ocean emerge.
